GME APOLLO PROGRAM

HOW MUCH FUEL IS IN THIS ROCKET TO THE MOON?

It is unclear just how many shares are in the diamond hands of apes around the world, but seeing as this number is most likely more than the float then the rocket will have plenty of fuel to reach lunar orbit. If this number is several times over the float, then the guidance systems will automatically set a course correction and re-route the rocket to the Martian surface. To ensure the rocket's fuel supply is maintained, BUYing pressure should be continuously added until it no longer becomes cost effective.

Go / No-Go for Launch

The launch checklist by **u/stevetheimpact** has been complete for several days now but the exact date of implementation of SR-DTC-2021-005 has been unclear, but at last check from the tower, the rule goes into effect today, again. All systems are still nominal and we are a go for launch.
